

Steps for using a standard wall bed (opening and closing):

- Make sure the floor space is clear to open the bed
- Grab the bed handles
- Gently pull the retractable part of the bed down to hip height without ever letting go
- Free one hand to pivot one of the two legs while firmly supporting the underside of the retractable part with the other hand
- Repeat the previous step for the other leg
- Once the two legs are fully deployed, finish lowering the box until the legs touch the floor
- To close it, simply lift the bed and pivot the legs in the same way as when opening, you must also hold the retractable part with the handles until it is completely closed
- BOFF wall beds can support 1000 lbs static
- It is important to note that the bed may try to go up violently in the absence of a mattress inside

Steps for using a wall bed with sofa (opening and closing):

- Make sure that the floor surface is clear to open the bed
- Verify that the sofa is properly aligned with the retractable part of the bed
- Remove the 4 cushions from the sofa and set them aside outside the floor surface designated for opening it
- Grab the handles of the bed
- Gently pull the retractable part of the bed down to hip height without ever letting go
- Free one hand to pivot one of the two legs while firmly supporting the underside of the retractable part with the other hand
- Repeat the previous step for the other leg
- Once the two legs are fully deployed, finish lowering the box until the legs touch the floor
- To close it, simply lift the bed and pivot the legs in the same way as when opening, you must also hold the handles of the bed in place retractable part until it is completely closed
- Once the bed is closed, simply put the 4 sofa cushions back in place
- BOFF wall beds can support 1000 lbs static
- It is important to note that the bed may try to go up violently in the absence of a mattress inside
